

UniCAP®

Unicondylar Arthroplasty System

The New Primary in Femoral Condyle Replacement

- Implants maintain existing biomechanics and proprioception
- Designed for patients with localized damage who want to resume an active lifestyle
- Bone and tissue sparing - no bridges are burned and future options are maintained

UniCAP Classic
Femoral Component

UniCAP Small
Femoral Component

"We found that a TKA does not restore normal knee function, independent of the effects of age and gender. Although this procedure restores the patient's ability to do many routine activities, a substantial deficit remains in meeting the challenges of many functional tasks that are important to the patient, especially tasks involving kneeling or squatting."

The New Algorithm for Tibiofemoral Arthrosis

Biological Grafting

UniCAP Knee Resurfacing

Unicompartmental Knee Replacement

- Lesions should be localized so that healthy cartilage borders each implant
- Majority of meniscus should be intact or sufficient to cover 1/3 of tibial surface
- Balanced medial/lateral joint space with no progression on Rosenberg views
- Normal alignment with $<4^{\circ}$ of varus or correctable with osteotomy
